## Nylon Sterilization Tubing

### Description:

ProPak Nylon Sterilization Tubing is made of durable, transparent nylon sterilization film. It features an imprinted external heat sensitive color indicator.

### Intended Use:

ProPak Sterilization Tubing is a protective device used to package heat tolerant items for sterilization and to maintain the sterility of instruments during storage. It is designed for use with steam and dry heat processes.

### Product Specifications:

Material: 1.6 mils nylon film.  
Heat Maximum: 360°F (182°C).  
Sealing: Heat sealers with temperatures of 500°F (260°C) and up.  
Color: Transparent.

### Product Capabilities:

Transparent film makes it easy to identify contents.

Sturdy durable film resists punctures and tearing. Provides better assurance of continued sterility during storage as long as the package integrity is not compromised.

Dual purpose nylon film may be used for sterilization in both dry heat and steam processes.

Built in chemical indicator changes color from green to blue upon exposure to minimum of 275°F (135°C) or more. Eliminates need for additional external process indicators.

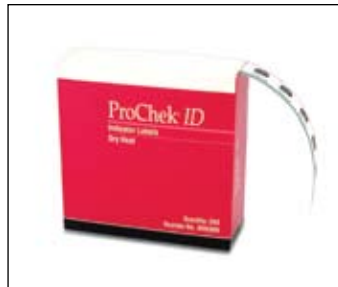

100 foot continuous roll provides versatile and economical packaging. Custom cut to exact size needed and reduce waste. Box may be used as a dispenser.
